Our Fantastic tips on how to protect your home from COVID-19

High-touch surfaces

Clean and disinfect hard surfaces in your home (countertops, door handles, furniture, etc) by using an alcohol-based disinfectant. Also, disinfect your phone, laptop, TV remote controls and all other frequently used items.

Protective equipment

Wear gloves when cleaning surfaces and if the detergents are aggressive, use a facemask. After cleaning, dispose of the protective gear securely in a trash bin.

Food

Soak all raw, whole fruits and vegetables in a solution of 35% food grade hydrogen peroxide or white vinegar, wash them and let them dry. Wash your hands before and after.

Trash

Use leakproof and easily removable plastic bags. Close them tightly when full. Place them in a second bin bag. Empty all your bins daily. Wash your hands after the procedure.

Laundry

Wash your towels and linens with 60-90°C programme. Do not wash your clothes with a high-degree programme to avoid damaging the fabric. Simply use a disinfectant laundry detergent.

Cleaning equipment

Immediately wash all cleaning cloths with 90°C programme. When removing your gloves, don't touch the outer surfaces and wash your hands immediately afterwards.
